NEWS RELEASE

Telkonet Receives CE Certification for its High-Speed Internet Access System

Enables Products to be Sold within the European Union

Germantown, MD, Telkonet, Inc. (Amex: TKO), the leader in providing in-building broadband access over existing electrical wiring, today announced that its high-speed Internet access system has received the Conformance Europeene (CE) certification. The CE mark is the official marking required by the European community indicating that a product has met rigorous testing standards and is approved for sale within the European Union (EU).

David Powell, Managing Director, International - Telkonet, commented, "The CE certification confirms that our products fulfill the requirements as defined in the European Directives. This is a significant milestone for Telkonet, as we can now commence accepting sales orders and installing our high-speed Internet system throughout the European Union and in other countries outside the EU that respect the CE certification."

"In anticipation of the CE certification, we successfully tested our system in hotels, apartments, schools and universities, and are focused on military and government applications in various countries, and can now move forward to solidify these opportunities and deploy our system. With this certification now in hand, Telkonet is positioned to pursue exciting growth opportunities with our European channel partners and to further expand our European distributor network," said Ronald W. Pickett, President and Chief Executive Officer of Telkonet.

About Telkonet

Telkonet's products provide connectivity over existing electrical wiring and do not require the costly installation of additional wiring or major disruption of business activity. In many situations, the Telkonet system can be implemented more quickly and less expensively than adding dedicated wiring or installing a wireless system. The Telkonet family of networking and internetworking products offers a viable and cost-effective alternative to the challenges of hardwiring and wireless local area networks (LANs). Telkonet's products are designed for use in commercial and residential applications, including multi-dwelling units and the hospitality and government markets.
